Time Management for MedTech Students

Personal Timetable & Time Management Plan for the CariSurg
Healthcare AI Program

Submitted by: Ansarah Mohammed

Programme: CariSurg Healthcare AI Program (Weeks 0–12)

Time Audit — Last Two Weeks

Category	Week 1 Hours	Week 2 Hours	Total Hours	Avg / Day	% of Week	Priority Flag
Sleep	58 hrs	54 hrs	112 hrs	8 hrs	33.3%	Essential
Work / Assignments	34 hrs	40 hrs	74 hrs	5.3 hrs	22%	Fixed
Self-Learning (Time to Catch Up)	4 hrs	25 hrs	29 hrs	2.1 hrs	8.6%	HIGH (needs increase)
Social / Leisure	24 hrs	8 hrs	32 hrs	2.3 hrs	9.5%	Reduced during busy weeks
Admin / Chores	18 hrs	9 hrs	27 hrs	1.9 hrs	8%	Group tasks where possible
Recovery Time	18 hrs	8 hrs	26 hrs	1.9 hrs	7.7%	Use carefully for relaxation
Unplanned / Unexpected	12 hrs	24 hrs	36 hrs	2.6 hrs	10.7%	Accept & Plan For (Usually planned for in advance if known)
TOTAL	168 hrs	168 hrs	336 hrs	24.0 hrs	100%	Full 2-week audit

This audit includes both programme and non-programme days because the goal was to understand how my time was realistically spent across the last two weeks. Week 1 represents my normal baseline schedule, while Week 2 shows how my time changed once CariSurg activities and assignments began. During Week 2, I was unfortunately unable to attend the live sessions on one day because I was travelling for the full day. However, I caught up on the required work afterwards, and it was included in my final submission.

This two-week audit helped identify where time shifted once the programme began and where protected study time needs to be maintained.

Time Audit Highlights

Self-learning increased sharply

4 hrs → 25 hrs

4 hrs

25 hrs

Social / leisure reduced during programme week

24 hrs → 8 hrs

24 hrs

8 hrs

Unplanned time doubled

12 hrs → 24 hrs

12 hrs

24 hrs

Work / assignments remained a major fixed commitment

34 hrs → 40 hrs

34 hrs

40 hrs

Total time across two weeks:

336 hrs

Proposed Weekly Schedule

Mercer General
— ED —

Day	Protected Time	Block Name	Main Focus	Eisenhower Category
 Monday	2 hrs	Planning + Setup Block	Review weekly tasks, check announcements, organise files	 Important but Not Urgent
 Tuesday	3 hrs	Final Submission / Polish Block	Complete final edits, check GitHub, prepare submission	 Urgent and Important
 Wednesday	3 hrs	Programme Reset Block	Attend session, review new week expectations, start tasks	 Urgent and Important
 Thursday	3 hrs	Technical Work Block	Coding, data cleaning, visualisation, or model practice	 Important but Not Urgent
 Friday	2 hrs	Documentation Block	Update README, write reflections, organise evidence	 Important but Not Urgent
 Saturday	5 hrs	Deep Work Block	Complete larger assignment/ project work	 Urgent and Important
 Sunday	2 hrs	Interim Submission Block	Prepare interim submission and catch up on unfinished work	 Urgent and Important
 TOTAL	20 hrs	Protected Weekly Programme Time	Live sessions, assignments, coding, research, documentation, GitHub, and catch-up	 Minimum Protected Time

Weekly Hour Distribution		
Monday		2 hrs
Tuesday		3 hrs
Wednesday		3 hrs
Thursday		3 hrs
Friday		2 hrs
Saturday		5 hrs
Sunday		2 hrs
 Total Protected Time: 20 hrs		

Protected weekly schedule designed to maintain consistency, meet deadlines, and support 20+ hours of CariSurg progress.

CariSurg Healthcare AI Week 1 – 12 Plan

Week	Programme Focus	Protected Time	Expected Output / Goal	Main Risk
0 Week 0	Orientation, onboarding & Python readiness	15–20 hrs	Get set up, submit daily, and publish Week 0 repo work	Establishing operating rhythm
 Phase 1 – Foundations (Weeks 1–4)	1 Settle into programme structure	20 hrs	Understand weekly rhythm and submit on time	Adjusting from Week 0
	2 Build consistency with submissions	20 hrs	Complete tasks with a more organised routine	Leaving work too close to the deadline
	3 Data handling and dataset understanding	20 hrs	Clean and explain dataset work clearly	Coding errors slowing progress
	4 Analysis and visualisation	20 hrs	Clear charts and clinical explanations	Unclear or overcomplicated visuals
 Phase 2 – Analysis & Modelling (Weeks 5–8)	5 Clinical meaning and interpretation	20 hrs	Connect technical outputs to healthcare meaning	Being too technical or too vague
	6 Review and strengthen submissions	20 hrs	Improved portfolio organisation and documentation	Older tasks piling up
	7 AI / machine learning foundations	20–22 hrs	Model work completed with basic interpretation	New AI concepts feeling challenging
	8 Model evaluation and interpretation	20–22 hrs	Explain outputs, accuracy, and limitations	Misinterpreting or overstating results
 Phase 3 – Ethics, Portfolio & Delivery (Weeks 9–12)	9 Ethics, privacy, and responsible AI	20 hrs	Stronger ethical reasoning in project work	Forgetting privacy, bias, or fairness
	10 Final project and portfolio planning	22 hrs	Clear final submission checklist	Multiple tasks overlapping
	11 Final project development and presentation	22–24 hrs	Project and presentation nearly complete	Time pressure near the deadline
	12 Final submission and reflection	22–24 hrs	Final work submitted and growth explained	Last-minute formatting or technical issues

Proposed schedule designed to protect weekly programme time while balancing workload, learning, and delivery milestones.

Eisenhower Matrix — Task Prioritisation

I used the Eisenhower Matrix with a clinical triage approach because it helps me decide what needs immediate attention and what can be scheduled, batched, or reduced. Like triage in an emergency department, my highest-priority tasks are the ones linked to live sessions, interim submissions, final submissions, and project deadlines. This works for me because it protects at least 20 hours each week for CariSurg without relying only on one long weekend session. Urgent program tasks are handled early, important deep-work tasks are scheduled, and lower-priority activities are batched or reduced so I can stay consistent across Weeks 1–12.

Justification of Proposed Schedule

It matches the programme rhythm

Built around interim work before Sunday and final polishing before Tuesday. This helps me avoid leaving everything until the final submission window.

It protects 20+ hours realistically

The plan spreads 20 protected hours across the week instead of depending only on one long weekend session. Short weekday blocks support consistency, while Saturday is reserved for deeper work.

It responds to my time audit

My audit showed that work, travel, and unplanned commitments can reduce available time. I therefore included catch-up, documentation, and recovery time so the schedule stays realistic.

It uses clinical triage thinking

I used the Eisenhower Matrix like a triage system: urgent tasks are handled first, important tasks are scheduled, and lower-priority tasks are batched or reduced.

This schedule works because it protects programme time early, keeps me consistent across the week, and gives me a clear system for deciding what needs attention first.
